## EDUCATION

---

### Purdue University

*Bachelor of Science in UI/UX Design, Minors in Computer Science and Psychology*

West Lafayette, IN

*Graduation: May 2028*

## PROJECTS

---

### JM&A Field UX Optimization Tool

Aug. 2026 – Present

- Leading discovery-phase research into F&I manager workflows, conducting 5 stakeholder interviews identifying how AI-generated recommendations can be surfaced without increasing cognitive load
- Synthesizing findings into priority matrix to guide a prioritized set of design recommendations for JM&A's product and UX teams to be adopted across 4,000+ dealerships nationwide

### AI Journey Mapping Platform

Jan. 2026 – May 2026

- Led end-to-end design of an AI-powered maintenance agent, conducting 6 usability tests from protocol to synthesis, improving data accuracy and reducing usability issues by 35%
- Built high-fidelity Figma prototype to surface AI-generated insights, enhanced content trust by 25%, and reduced overall manual maintenance effort
- Communicated design decisions and rationale directly to CEO and VP of Product, aligning stakeholder expectations with user needs

### Microsoft Azure Health Models

Aug. 2025 – Dec. 2025

- Evaluated and redesigned key screens and UX workflows in existing Azure Monitor Health Models (configuration, visualization, alerting)
- Redesigned the configuration workflow, reducing task completion steps by 30% and improving navigation efficiency
- Built interactive Figma prototype, keeping in mind technical constraints of a large-scale enterprise platform, enabling faster issue detection

### MIC CASA

Jan. 2025 – May 2025

- Planned and facilitated 5 usability tests, synthesizing findings into actionable design iterations
- Delivered high-fidelity Figma prototype redesigning report-writing feature for Court Appointed Special Advocates, improving efficiency, and enabling scalable nationwide adoption for 80,000+ advocates

## EXPERIENCE

---

### Undergraduate Research Assistant

Jan. 2026 – Present

*Purdue University, NHanCE Lab*

*West Lafayette, IN*

- Conducting human factors research focused on user response to autonomous vehicle errors, with emphasis on elderly populations
- Designing and developing a real-time Python-based HMI to visualize autonomous vehicle (AV) behavior, improving AI decision clarity for 3 test scenarios
- Synthesized a comprehensive literature review across 70+ sources on human trust in automation, AV HMI design, and elderly user interaction, establishing the research foundation for an ongoing study

## TECHNICAL SKILLS

---

**Design and Research:** UI/UX Design, Interaction Design, Information Architecture (IA), Wireframing, Rapid Prototyping, Accessibility (WCAG 2.1), Heuristic Evaluation, Affinity Diagramming, Human-Centered Design

**Development:** Python, HTML5, JavaScript, Bootstrap, CSS

**Tools:** Figma (Advanced), Sketch, Miro, Adobe Creative Suite (Photoshop, Illustrator, InDesign), Framer

## LEADERSHIP AND INVOLVEMENT

---

### Kappa Theta Pi | *Founding Member & Director of Philanthropy*

May 2026 – Present

- Founded and launched the chapter's philanthropy initiative, leading 3 tech literacy workshops engaging 50+ community members

### Human Factors and Ergonomics Society (HFES) | *Undergraduate Representative*

Jan. 2026 – Present

- Represent 200+ undergraduate and grad students, organizing events and connecting peers with HCI research opportunities and industry applications in human factors
